## 4-20mA Isolator with DC Supply - DIN or Panel Mount

### Description

Each DSCL23 loop powered isolator provides 1 or 2 channels of analog signal protection by electrically isolating its input from output for any DC process signal in the range 4-20mA. The DSCL23 feeds isolated DC power to the field transmitter and returns a fully isolated 4-20mA analog signal (see Figure 1).

The input signal is chopped by a proprietary DC chopper circuit, isolation is provided by transformer coupling, a proprietary technique is used to suppress transmission of common mode spikes or surges, and the output signal from the secondary of the transformer is reconstructed to the original input signal.

**Dimensional and Wiring Information**

The DSCL23 DIN mount package accepts EN50022 (35 x 7.5) type rails; Dataforth PN SCMRAIL1-xx. Both DSCL models may be adapted for screw mounting to wall or panel.

Multiple DSCL23 modules may be mounted next to each other without effecting input or output signals. The compact and narrow 17.5mm housing allows for up to 27 devices in a 19" rack space. The DSCL23 may be mounted in any position.

Screw terminals with wire protection clamps sized for  $2 \times 0.75\text{mm}^2$  or  $1 \times 2.5\text{mm}^2$  wires.

The DSCL23 requires no maintenance.
